THE HUNT NEVER ENDS · PASS PHRASE: FOR THE EMPIRE

THE IDEA

◆ 100-WORD SUMMARY

The Jedi are scattered, but not extinct. OBSIDIAN is a classified Imperial command portal that fuses a disorganized purge into a single hunting organism: a live galaxy tracker with probe drops, wanted dossiers with psychoprofiles, a kanban operations board, intelligence that escalates into hunts, a propaganda studio that disrupts Jedi recruitment, and encrypted Inquisitor comms. Built as a fully original, offline-first web app with its own design system, custom 3D renders from a self-written raytracer, and a 62-second trailer with an original score – the hunt, finally coordinated.

// WHY THIS WINS

FUNCTIONALITY

Every module is live and demoable – radar sweeps, drag-drop dispatch, a working terminal, chat that replies. Judges don't read about the app; they operate it.

AESTHETIC

Obsidian black, imperial red, serif display type, scanline-free clean surfaces. Feels institutional and inevitable.

UI/UX

One cinematic design system – "Iron Protocol" – with a gate, boot sequence, scramble typography, and a full in-app standards page.

ORIGINALITY

Zero canon characters, zero templates: nine original Jedi, ten sectors, six Inquisitors, seven lore documents, an original raytracing engine, an original score.

THE PROBLEM

"Order 66 has fallen. Hundreds of survivors hide across a thousand worlds. They are rebuilding. They are recruiting. They are learning to vanish. The Empire has legions, but no eyes."

– THE BRIEF · PATH 2

After the purge, the Empire's coordination collapsed:

FAILURE	CONSEQUENCE
Fragmented intel	Each sector files reports into a void – no single picture of the galaxy.
Isolated Inquisitors	Six hunters, six separate hunts. No shared channel, no joint doctrine.
Unprotected recruitment lanes	The Jedi recruit through refugee networks, and nothing intercepts them.
No decision layer	Intel never becomes action: sightings sit in ledgers while targets slip away.

// THE OPPORTUNITY

The brief grants total creative freedom. We built the nervous system the Empire never had – a single classified network where every sector, every probe, and every citizen becomes a sensor in the Emperor's hand.

THE SOLUTION

OBSIDIAN is a classified Imperial command portal. One login. Twelve modules. A complete hunting organism.

MODULE	WHAT IT DOES	DEMO HOOK
Command Deck	Hero status board: live HUD, manifesto preview, module ecosystem, hunt metrics, ticker.	First screen, giant type
Galaxy Tracker	Radar map of 10 sectors with threat heat, probe drops, sighting log.	Click a blip → dossier
Wanted Dossiers	Nine original Jedi with psychoprofiles; printable warrants.	Open "The Ember"
Intelligence	Probe/ISB feed with redaction, confirmation, escalation.	Escalate → op created
Operations	Kanban hunt board: plan → active → contained → failed.	Drag a card
Interdiction	Propaganda studio: compose + transmit sector-wide broadcasts.	Transmit to Torvane
Inquisitor Uplink	Encrypted chat with six original Inquisitors who reply in-character.	Message "The Hound"
Imperial Archive	Seven lore documents – Directive 66, the Doctrine, psychoprofiles.	Open Directive 66
Terminal	Working shell with a filesystem: help, ls, cd, cat, scan, locate, ping.	Type <code>cat targets.log</code>
Manifesto	The Emperor's case against the Order – scramble-revealed prose.	Scramble animation
Hunt Metrics	Purge completion bar, giant count-up statistics.	Watch 11% fill
Imperial Standards	The in-app design system: color, type, components, motion.	Judges' favorite

Access model: passphrase gate (**FOR THE EMPIRE**) → typed boot sequence → clearance ALPHA-7 → full network.

ARCHITECTURE & TECHNOLOGY

PRIMARY BUILD — NEXT.JS 15

NEXT.JS 15

REACT 19

FRAMER MOTION

GSAP

LENIS

THREE.JS

ZUSTAND

TAILWIND

SONNER

LUCIDE

3D — CUSTOM RAYTRACER

All 3D renders come from a vectorized numpy raytracer written from scratch: spheres, boxes, cylinders, glow shells, reflections, starfields, tonemapping and vignette grading. Eight scenes, zero external 3D software.

FILM — BUILT BY PIPELINE

The 62-second trailer assembles 3D renders, real app footage (recorded via headless browser), title cards and a voiceover through an ffmpeg conductor script. Fully reproducible.

AUDIO — SYNTHESIZED

The film score ("Iron Protocol") and every UI sound are generated with code — WebAudio oscillators and WAV synthesis. No licensed tracks anywhere.

SECURITY MODEL

Passphrase gate with incident logging on failure, offline-first operation, self-hosted fonts, zero external calls. The interface itself is the threat theater.

FALLBACK BUILD

A zero-dependency vanilla HTML/CSS/JS version ships alongside the Next.js app — the product runs from a single folder on any static host, anywhere, forever.

DEPLOYMENT

One click to Vercel: the web/ folder is a standard Next.js project; import from GitHub and it deploys in minutes with a shareable judge link.

WORLD-BUILDING & ORIGINALITY

Nothing in OBSIDIAN references canon. Every name, doctrine and glyph is original to our universe.

ASSET	DETAIL
Solenne Kade – "The Ember"	Former master of the Torvane enclave. Thermal projection. Will fight to the death. Reward 500,000.
Seraphine Nyx – "The Shade"	Killed two Inquisitors. Shadow melding. The Empire's highest-priority disruption target.
Idris Vale – "The Archivist"	Emptied the archives before the purge. The Emperor wants him intact.
Ten Sectors	Torvane, Myrrah, Velaros, Ostrak, Hearth, Kess, Bellhaven, Nyxaris, Dorn, Valdris – each with garrison, threat index and intel.
Six Inquisitors	The Hound, The Surgeon, The Zealot, The Whisper, The Hammer, The Calculator – each with dialogue.
Seven Documents	Directive 66, Exile Protocol, On the Jedi Sects, Emperor's Address, the Doctrine, the Inquisitor's Manual, Psychoprofile.
The Sigil	Twelve blades around the all-seeing core – drawn as pure SVG, used across app, posters, deck and film.

EVERYTHING IS OURS

- Code: vanilla or Next.js, written from scratch – no templates, no boilerplate clones.
- Graphics: SVG emblem system, procedural posters, canvas galaxy, raytraced scenes.
- Sound: synthesized score and UI audio – original composition.
- Film: original voiceover, original edit, original motion design.

THE 3-MINUTE DEMO

Passphrase: **FOR THE EMPIRE** · Operative N-771 · Clearance ALPHA-7

- 1

Gate – "The Empire needs a nervous system. This is it." Click **INITIALIZE SEQUENCE**.
- 2

Boot – the terminal types system lines; enter the passphrase when prompted.
- 3

Command Deck – giant hero type, live HUD, module ecosystem. "Eleven modules. One hunt."
- 4

Tracker – click a blip. "A confirmed sighting of Solenne Kade – reward half a million."
- 5

Dossiers → Ops – open a target, file it to operations, drag the card to **ACTIVE**.
- 6

Interdiction – compose a broadcast, transmit to Torvane.
- 7

Comms – message Inquisitor Vex; he replies in-character.
- 8

Terminal – "This is the mainframe." Type `cat targets.log`, scan kess.
- 9

Standards – "Our design system lives inside the product." Close.

// DELIVERABLE INDEX

#	DELIVERABLE	LOCATION
1	Write-up (≤100 words)	WRITEUP-options.md (this dossier, Section 01)
2	Product – OBSIDIAN portal	web/ (Next.js) · app/ (vanilla)
3	Pitch deck (no screenshots)	OBSIDIAN-PITCH-DECK.pptx
4	UI/UX design	OBSIDIAN-UX.pdf + in-app Standards module
5	Promo film (62s)	OBSIDIAN-PROMO.mp4
6	3D renders	renders/ (8 scenes, custom raytracer)
7	Bonus	Poster, banner, showcase site
