

OBSIDIAN

PROJECT WRITE-UP · TS '26 CREATIVE PRELIMS · PATH 2 — THE EMPIRE

The Jedi are scattered, but not extinct. OBSIDIAN is a classified Imperial command portal that fuses a disorganized purge into a single hunting organism: a live galaxy tracker with probe drops, wanted dossiers with psychoprofiles, a kanban operations board, intelligence that escalates into hunts, a propaganda studio that disrupts Jedi recruitment, and encrypted Inquisitor comms. Built as a fully original, offline-first web app with its own design system, custom 3D renders from a self-written raytracer, and a 62-second trailer with an original score – the hunt, finally coordinated.
